

MoraSpirit Web Pillar Recruitment

Task 01: Member Availability Dashboard

Interview Date: April 2026

1. Overview

Welcome to the MoraSpirit Web Pillar technical evaluation. As a member of the Web Pillar, you will be responsible for building and maintaining internal and public-facing web applications.

The objective of this task is to build a **Frontend Dashboard** that interacts with our existing Member Status API. You are required to fetch data, handle user input, and display status information in a clean, professional manner.

2. Project Requirements

Your application must fulfill the following functional requirements:

- **Framework:** You may use React, Next.js, Vue, or Angular.
- **Member List:** Display all organization members fetched from the API in a responsive grid or card layout.
- **Selection Logic:** Allow the user to select a member and a specific date.
- **Availability Check:** Perform a real-time check against the backend for the selected member and date.
- **Visual Feedback:**
 - Show a green indicator if the member is available.
 - Show a red indicator and the provided "reason" if the member is busy.
- **Deployment:** The application must be hosted online (e.g., Vercel, Netlify, or GitHub Pages).

3. API Documentation

The backend service is live at: <https://task.moraspirit.com/>

Endpoint 1: Get Member List

Retrieve the full directory of MoraSpirit members.

- **Method:** GET
- **Path:** /api/members

Sample Response:

```
{
  "count": 27,
  "members": [
    {
      "id": "MSP001",
```

```
    "name": "Thisuka Kodithuwakku",
    "role": "CMO"
  },
  ...
]
```

Endpoint 2: Check Availability

Check the status of a specific member for a given date.

- **Method:** POST
- **Path:** /api/availability/check
- **Header:** Content-Type: application/json

Sample Request Body:

```
{
  "msp_id": "MSP001",
  "date": "2026-04-08"
}
```

Sample Response (Busy Status):

```
{
  "requested_date": "2026-04-08",
  "id": "MSP001",
  "name": "Thisuka Kodithuwakku",
  "role": "CMO",
  "status": "busy",
  "reason": "Unavailable because the CMO is leading a strategy workshop."
}
```

4. Evaluation Criteria

During the interview, we will evaluate your submission based on:

1. **Component Architecture:** How you structured your frontend code.
2. **State Management:** How you handle loading states and API data.
3. **UI/UX Design:** Responsiveness, accessibility, and visual appeal.
4. **Error Handling:** How the app behaves if the API returns an error or no data.

5. Interview Presentation

There is no requirement to submit your code in advance. Instead, please come prepared for your interview with the following:

- **Live Demo:** A link to your hosted application ready to be shown.

- **Source Code:** Your code available on a public GitHub repository or locally on your machine for a technical walk-through.
- **Explanation:** Be ready to discuss your technical choices and how you integrated the API.

Best of luck! We look forward to seeing your work in person.
